

$$u(x) = x \int_0^x y u(y) dy + x$$

$$u(x) = x e^{\frac{x^3}{3}}$$

## Imagine having the power to experiment...

Imagine having more time to ponder the abstract, rather than having to derive the solution.

With MACSYMA® *symbolic math software* you can!

No other software today packs the computational power, versatility, and reliability of MACSYMA. MACSYMA can tackle any mathematical application you may have, whether in algebra, calculus, trigonometry, or practically any other branch of higher mathematics. It gives you problem-solving tools such as Laplace and Fourier transforms, Taylor and Poisson series, solution of first and second order differential equations, solutions to integrals, and more. It gives you sophisticated 2-D and 3-D graphics, and can convert your equations into Fortran or 'C' for optimal numeric performance, or T<sub>E</sub>X for inclusion in publications.

MACSYMA provides unequalled accuracy too,

with your choice of exact or arbitrary precision arithmetic, and gives you results at speeds from 10 to 100 times faster than traditional methods.

All this power is remarkably easy to use. With the help of the User's Guide, extensive on-line documentation, executable examples and demonstrations, and the Quick Reference Card, a beginning MACSYMA user can quickly become proficient, tackling problems that might otherwise have been too difficult or time-consuming.

Whatever your application — engineering, science, economics or pure math — your work is too important to trust to any other math software. You deserve MACSYMA.

More than just a system for doing mathematics by computer, it's the power tool for mathematics.
